CLASS QUIZ: JANUARY 30: PARTIAL FRACTIONS AND RADICALS

MATH 153, SECTION 55 (VIPUL NAIK)

Your name (print clearly in capital letters):

- (1) Which of these functions of x is not elementarily integrable? Last year: 22/27 correct
 - (A) $x\sqrt{1+x^2}$
 - (B) $x^2\sqrt{1+x^2}$
 - (C) $x(1+x^2)^{1/3}$
 - (D) $x\sqrt{1+x^3}$
 - (E) $x^2\sqrt{1+x^3}$
 - Your answer:
- (2) For which of these functions of x does the antiderivative necessarily involve both $\arctan and \ln$? Last year: 21/27 correct
 - (A) 1/(x+1)
 - (B) $1/(x^2+1)$
 - (C) $x/(x^2+1)$
 - (D) $x/(x^3+1)$
 - (E) $x^2/(x^3+1)$

Your answer:

- (3) (**) Consider the function $f(k) := \int_1^2 \frac{dx}{\sqrt{x^2+k}}$. f is defined for $k \in (-1,\infty)$. What can we say about the nature of f within this interval? Last year: 4/27 correct
 - (A) f is increasing on the interval $(-1, \infty)$.
 - (B) f is decreasing on the interval $(-1, \infty)$.
 - (C) f is increasing on (-1, 0) and decreasing on $(0, \infty)$.
 - (D) f is decreasing on (-1, 0) and increasing on $(0, \infty)$.
 - (E) f is increasing on (-1, 0), decreasing on (0, 2), and increasing again on $(2, \infty)$.

Your answer: _

- (4) (*) Suppose F is a (not known) function defined on $\mathbb{R} \setminus \{-1, 0, 1\}$, differentiable everywhere on its domain, such that $F'(x) = 1/(x^3 x)$ everywhere on $\mathbb{R} \setminus \{-1, 0, 1\}$. For which of the following sets of points is it true that knowing the value of F at these points **uniquely** determines F? Last year: 14/27 correct
 - (A) $\{-\pi, -e, 1/e, 1/\pi\}$
 - (B) $\{-\pi/2, -\sqrt{3}/2, 11/17, \pi^2/6\}$
 - (C) $\{-\pi^3/7, -\pi^2/6, \sqrt{13}, 11/2\}$
 - (D) Knowing F at any of the above determines the value of F uniquely.
 - (E) None of the above works to uniquely determine the value of F.

Your answer: _

(5) (*) Consider a rational function f(x) := p(x)/q(x) where p and q are nonzero polynomials and the degree of p is strictly less than the degree of q. Suppose q(x) is monic of degree n and has n distinct real roots a_1, a_2, \ldots, a_n , so $q(x) = \prod_{i=1}^n (x - a_i)$. Then, we can write:

$$f(x) = \frac{c_1}{x - a_1} + \frac{c_2}{x - a_2} + \dots + \frac{c_n}{x - a_n}$$

for suitable constants $c_i \in \mathbb{R}$. What can we say about the sum $\sum_{i=1}^{n} c_i$? Last year: 12/27 correct

- (A) The sum is always 0.
- (B) The sum equals the leading coefficient of p.
- (C) The sum is 0 if p has degree n-1. If the degree of p is smaller, the sum equals the leading coefficient of p.
- (D) The sum is 0 if p has degree smaller than n-1. If p has degree equal to n-1, the sum is the leading coefficient of p.
- (E) The sum is 0 if p is a constant polynomial. Otherwise, it equals the leading coefficient of p.
 - Your answer:
- (6) (**) Hard right now, will become easier later: Suppose F is a continuously differentiable function whose domain contains (a,∞) for some $a \in \mathbb{R}$, and F'(x) is a rational function p(x)/q(x) on the domain of F. Further, suppose that p and q are nonzero polynomials. Denote by d_p the degree of p and by d_q the degree of q. Which of the following is a necessary and sufficient condition to ensure that $\lim_{x\to\infty} F(x)$ is finite? Last year: 3/27 correct
 - (A) $d_p d_q \ge 2$
 - (B) $d_p d_q \ge 1$

 - (C) $d_p = d_q$ (C) $d_p = d_q$ (D) $d_q d_p \ge 1$ (E) $d_q d_p \ge 2$

For the remaining questions, we build on the observation: For any nonconstant monic polynomial q(x), there exists a finite collection of transcendental functions f_1, f_2, \ldots, f_r such that the antiderivative of any rational function p(x)/q(x), on an open interval where it is defined and continuous, can be expressed as $g_0 + f_1g_1 + f_2g_2 + \cdots + f_rg_r$ where g_0, g_1, \ldots, g_r are rational functions.

- (7) (*) For the polynomial $q(x) = 1 + x^2$, what collection of f_i s works (all are written as functions of x)? Last year: 15/27 correct
 - (A) $\arctan x$ and $\ln |x|$
 - (B) $\arctan x$ and $\arctan(1+x^2)$
 - (C) $\ln |x|$ and $\ln(1+x^2)$
 - (D) $\arctan x$ and $\ln(1+x^2)$
 - (E) $\ln |x|$ and $\arctan(1+x^2)$

Your answer:

- (8) (**) For the polynomial $q(x) := 1 + x^2 + x^4$, what is the size of the smallest collection of f_i s that works? Last year: 7/27 correct
 - (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
 - (E) 5

Your answer:
